

Project Design Phase Proposed Solution Template

Date	03-10-2026
Team ID	SWTID-2026-8713
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The ServiceNow Incident form accepts incorrect or incomplete data because fields do not react to what the user does. Fields that should be mandatory, read-only or hidden stay editable, errors are found only after the form is submitted, and users do not get instant guidance. This causes poor data quality, rework and a poor user experience.
2.	Idea / Solution description	Implement Client Scripts and UI Policies on the ServiceNow Incident form to control field behavior dynamically, without submitting the form. Client Scripts (onLoad and onChange) read and set field values and show messages, and UI Policies make fields mandatory, read-only or visible based on conditions such as the Incident state or category. The solution is tested on the Incident form with different field values and by checking the browser console.
3.	Novelty / Uniqueness	Form fields respond instantly to user actions and live field values, with no page reload or submit. Client Scripts and UI Policies work together on one form, and every rule is checked on the Incident form with different field values.
4.	Social Impact / Customer Satisfaction	Users get instant guidance while filling the form, which reduces incorrect data entry and rework. Cleaner incident data improves reporting and gives service desk agents a smoother, more reliable experience.
5.	Business Model (Revenue Model)	No direct revenue is planned. The value is better data quality and less support effort for an organization that uses ServiceNow. The Client Scripts and UI Policies can be reused by other ServiceNow teams.
6.	Scalability of the Solution	The same Client Script and UI Policy pattern can be reused for other forms, tables and fields without redesign, and it runs on the ServiceNow cloud platform.
