

Acceptance Testing

UAT Execution & Report Submission

Date	03-10-2026
Team ID	SWTID-2026-8713
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Implement Client Script & UI Policy (Incident) project at the time of the release to User Acceptance Testing (UAT). The project uses UI Policies and Client Scripts (onLoad, onChange and onSubmit) on the ServiceNow Incident form so that fields become mandatory, read-only or visible when defined conditions are met, and so that the form responds immediately without being submitted.

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved. It is completed after UAT, when the defects found are logged.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	--	--	--	--	--
Duplicate	--	--	--	--	--
External	--	--	--	--	--
Fixed	--	--	--	--	--
Not Reproduced	--	--	--	--	--
Skipped	--	--	--	--	--
Won't Fix	--	--	--	--	--
Totals	--	--	--	--	--

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested. At the time of release to UAT, all test cases are planned and none has been executed yet.

Section	Total Cases	Not Tested	Fail	Pass
Mandatory Fields	3	3	0	0
Visibility & Read-only	2	2	0	0
Client Script – onLoad / onChange	1	1	0	0
Client Script – onChange	1	1	0	0
Client Script – onSubmit	1	1	0	0
Maintenance & Console	2	2	0	0
Totals	10	10	0	0

Test Case Coverage

Section	Verification Covered
Mandatory Fields	Short description is mandatory; Close code and Close notes become mandatory on Resolved/Closed and stop being mandatory when the State changes back.
Visibility & Read-only	On hold reason is shown or hidden by State; controlled fields are read-only on closed incidents.
Client Script – onLoad / onChange	The form opens in the correct initial state with guidance; onLoad logic runs once.
Client Script – onChange	Dependent fields update when Category, State, Impact or Urgency changes, and not while the form is loading.
Client Script – onSubmit	Invalid data is blocked with a clear message; valid data is saved.
Maintenance & Console	Rules can be activated or deactivated; no script errors appear in the browser console.
