

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	03-10-2026
Team ID	SWTID-2026-8713
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement:

A ServiceNow administrator needs to dynamically control Incident form fields so that selected fields become mandatory, read-only, or visible when defined Incident conditions are met. Without this behavior, users may enter incomplete information, edit protected fields, or see unnecessary fields.

Project Focus:

Implement Client Scripts and UI Policies on the Incident table to improve form usability, enforce consistent data-entry practices, and dynamically respond to user actions and Incident conditions.

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 10 minutes to prepare
- 1 hour to collaborate
- 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

A Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.
Team: Dinesh Rajan (Team Leader), Dharshini V, Divya A, Dharshan Rajaram

B Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.
Goal: restrict record access based on a field value using a script-controlled ACL

C Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article →](#)

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

PROBLEM

How might we restrict record access using a script-controlled ACL based on a field value?

2 Key rules of brainstorming

To run a smooth and productive session

- Stay in topic.
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstormed Ideas:

1. Create a UI Policy to make selected Incident fields mandatory when a condition is met.
2. Create a UI Policy to make selected Incident fields read-only when a condition is met.
3. Create a UI Policy to show or hide selected fields based on Incident conditions.
4. Use a Client Script to dynamically change field behavior when a user changes a value on the Incident form.
5. Apply rules to relevant Incident fields such as State, Category, Subcategory, Assignment Group, and Resolution/Close Notes.
6. Provide immediate form behavior without requiring the Incident record to be submitted.
7. Test Client Scripts and UI Policies using different Incident states and field combinations.
8. Check that mandatory, read-only, and visibility rules do not conflict.

Idea Grouping:

- Mandatory Control – ensure required Incident information is entered.
- Read-only Control – prevent inappropriate modification of fields.
- Visibility Control – display relevant fields only when needed.
- Dynamic Interaction – use Client Scripts for client-side responses to field changes.
- Validation & Testing – verify consistent behavior across Incident conditions.

Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

TIP

You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

Sakthivel S (Team Leader)

Deny read when field = Confidential	gs.hasRole() + current.<field> checks	Record-level and field-level ACLs
Log every denied access for audit		

Thabeshwin

Allow only assignment group members	Impersonation testing across roles	Reusable Script Include for checks
Test-data set for edge cases		

Vishal

Restrict by sensitivity / priority field	Exceptions- creator and assigned-to	Clear message when access is denied
Document ACL logic + update set		

Supriya

Deny-unless ACLs with clear order	Lightweight Script, no extra queries	Handle empty / changed field values
Dashboard to monitor ACL denials		

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

Write the core script that blocks records by field value

Deny read when field = Confidential
gs.hasRole() + current.<field> checks
Record-level and field-level ACLs
Restrict by sensitivity / priority field
Deny-unless ACLs with clear order

Add exceptions so legitimate users keep access

Allow only assignment group members
Exceptions: creator and assigned-to
Handle empty / changed field values

Test every scenario before release

Impersonation testing across roles
Test-data set for edge cases

Make the logic reusable, fast and documented

Reusable Script Include for checks
Lightweight script, no extra queries
Document ACL logic + update set

Monitor and communicate denials

Log every denied access for audit
Clear message when access is denied
Dashboard to monitor ACL denials

Step-3: Idea Prioritization

Prioritized Ideas:

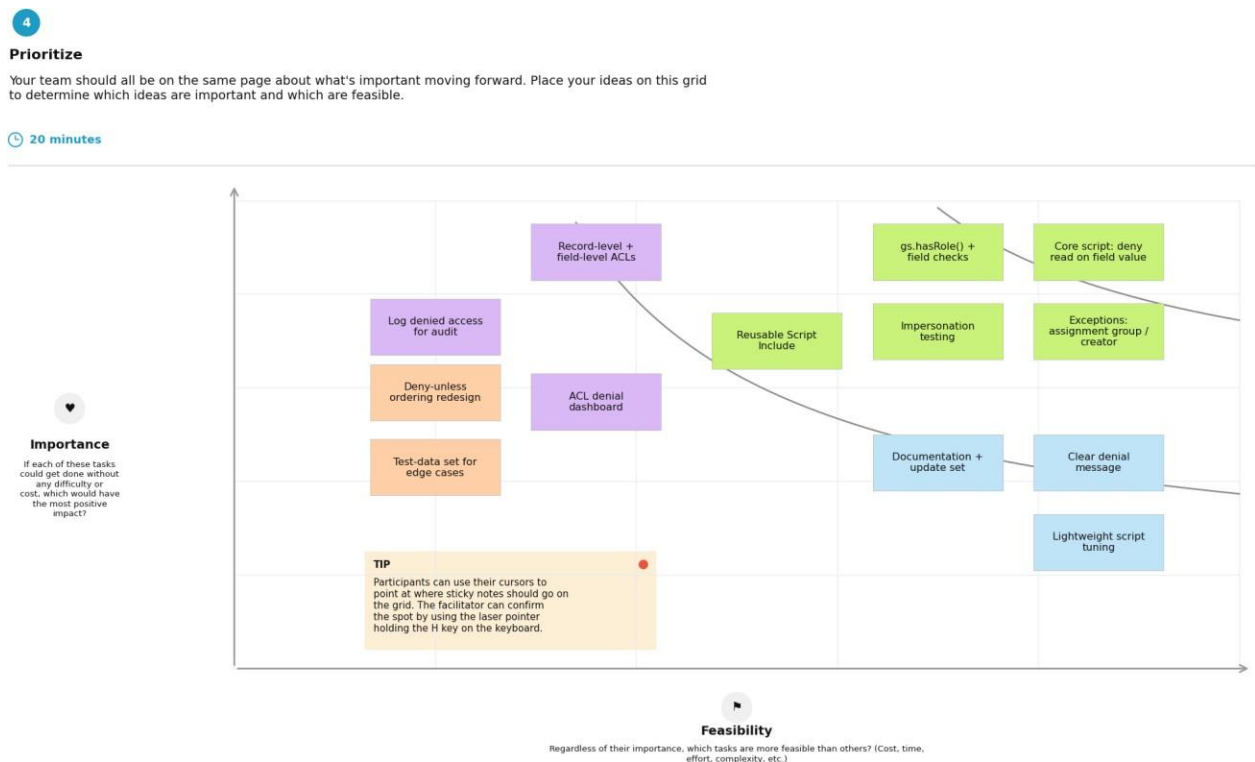

1. Configure UI Policies for mandatory, read-only, and visibility behavior.
2. Implement Client Scripts for dynamic field behavior that requires client-side logic.
3. Test the rules across different Incident states and user actions.
4. Review the form for conflicting or unnecessary field rules.
5. Provide clear and consistent data-entry behavior for service desk users.

Priority Rationale:

Field control is the highest priority because it directly supports the project objective. Client-side interaction and testing follow to ensure that the Incident form responds correctly and consistently.

Final Selected Solution:

Use a combined Client Script and UI Policy approach on the Incident table. UI Policies will control mandatory, read-only, and visible behavior when defined conditions are met, while Client Scripts will handle dynamic client-side interactions that require additional logic.

Sticky-note colours: green = high importance and high feasibility (do first); purple = high importance, lower feasibility (plan next); blue = lower importance, high feasibility (quick wins); orange = lower importance and feasibility (reconsider).

Project Task Assignment – Milestones

Milestone (Epic)	Task	Assigned to	Time	Level	Status
Milestone-1: Incident Form Configuration	Identify Incident fields and conditions	Vishal	30m	Easy	To do
Milestone-2: UI Policy – Mandatory Fields	Configure UI Policy to make selected fields mandatory	Thabeshwin	45m	Easy	To do
Milestone-3: UI Policy – Read-only Fields	Configure UI Policy to make selected fields read-only	Thabeshwin	45m	Easy	To do
Milestone-4: UI Policy – Visibility	Configure UI Policy to show/hide selected fields	Supriya	45m	Easy	To do
Milestone-5: Client Script	Implement dynamic Incident field behavior	Supriya	1h	Medium	To do
Milestone-6: Testing & Validation	Test conditions, field behavior and user actions	SakthivelS	1h	Medium	To do
Milestone-7: Conclusion	Document project outcome and verify consistent data entry	Sakthivel S	30m	Easy	To do
