

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03-10-2026
Team ID	SWTID-2026-8713
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	UI Policy – Field Control	Create UI policies with conditions on the Incident form Set field actions: mandatory, visible and read-only Reverse the actions when the condition is no longer true
FR-2	Client Script – onLoad	Create an onLoad Client Script Set the initial form state and default values Show guidance messages when the form opens
FR-3	Client Script – onChange	Create onChange scripts on Category, State, Impact and Urgency Update or clear dependent fields Skip the logic while the form is loading
FR-4	Client Script – onSubmit	Create an onSubmit Client Script Validate required and consistent data Show a message and stop the save if the data is incorrect
FR-5	User Messages	Show field messages and form info messages Show an alert for invalid entries
FR-6	Testing and Verification	Test each rule for every State and Category Check the browser console for script errors Confirm the form reacts without being submitted
FR-7	Rule Maintenance	Activate or deactivate policies and scripts Update rules when fields or processes change

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The form shows only relevant fields, mandatory fields are clearly marked, and messages are short and easy to understand.
NFR-2	Security	Client-side rules guide users but are not a security control; access is enforced on the server by roles and ACLs, and UI Policies and Client Scripts do not bypass them.
NFR-3	Reliability	The same field values always give the same form behavior, and scripts handle empty or unexpected values without errors.
NFR-4	Performance	Rules run in the browser and avoid synchronous server calls, so the form keeps loading and responding quickly.
NFR-5	Availability	The rules are delivered with the form from the ServiceNow cloud instance, so they work whenever the instance is available.
NFR-6	Scalability	The same patterns can be reused for other tables and fields, and rules can be moved between instances with update sets.
