

Project Design Phase Problem – Solution Fit Template

Date	03-10-2026
Team ID	SWTID-2026-8713
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 3-5 y.o. kids ServiceNow administrators who manage form behavior and data quality ServiceNow developers who write and maintain Client Scripts and UI Policies Service desk agents / end users who create and update incidents	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Form behavior must change on the client side without submitting the form Limited visibility for debugging client-side scripts Results depend on UI Policy order, script triggers and live field values	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking Server-side validation: works only after the form is submitted Manual instructions to users: easy to ignore and inconsistent Manual testing of every field combination: slow, and errors are hard to trace	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. Make fields mandatory, read-only or hidden based on the Incident state or category Write Client Scripts and UI Policies that react to user actions on the form Reduce incorrect data entry and guide users while they fill the form	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Form fields have no built-in rules for dependent or conditional behavior Errors are found only after submission, when the data is already wrong Field rules are not defined or applied consistently across users	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) Writes onChange and onLoad Client Scripts that use g_form to read and set field values Creates UI Policies with conditions and actions (Mandatory, Read-only, Visible) Tests on the Incident form with different field values and checks the browser console	
3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Managers ask for complete and correct incident data Incidents are saved with missing or wrong values such as Resolution Notes A user asks "Why can I still edit a closed incident?"	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. Client Scripts and UI Policies on the Incident form Client Scripts react to onLoad and onChange events, and UI Policies set Mandatory, Read-only and Visible actions The form guides users instantly, so incorrect data entry is reduced and no submit is needed	8.1. ONLINE CH What kind of actions do customers take online? Extract online channels from #7 ServiceNow instance: Incident form, Client Scripts, UI Policies, browser console, form and list views	Extract online & offline CH of BE	
4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: confused, frustrated by form errors, uncertain which fields to fill After: confident, guided by the form, in control of clean and correct data	8.2. OFFLINE CH What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Review discussions with the manager and colleagues Team coordination on form rules and exceptions			
Identify strong TR & EM
